# **WAITING WITH YOU-CANDIDATES' FEELINGS MATTER**

## **-A Human-Centered AI Recruitment Prototype**

*Your feelings Matter*

Martin Cao

Why I built this

I once tried to find a summer HR internship, and AI HR was the homework assigned to me after the group interview. I had only 18 hours to prepare for the individual interview.

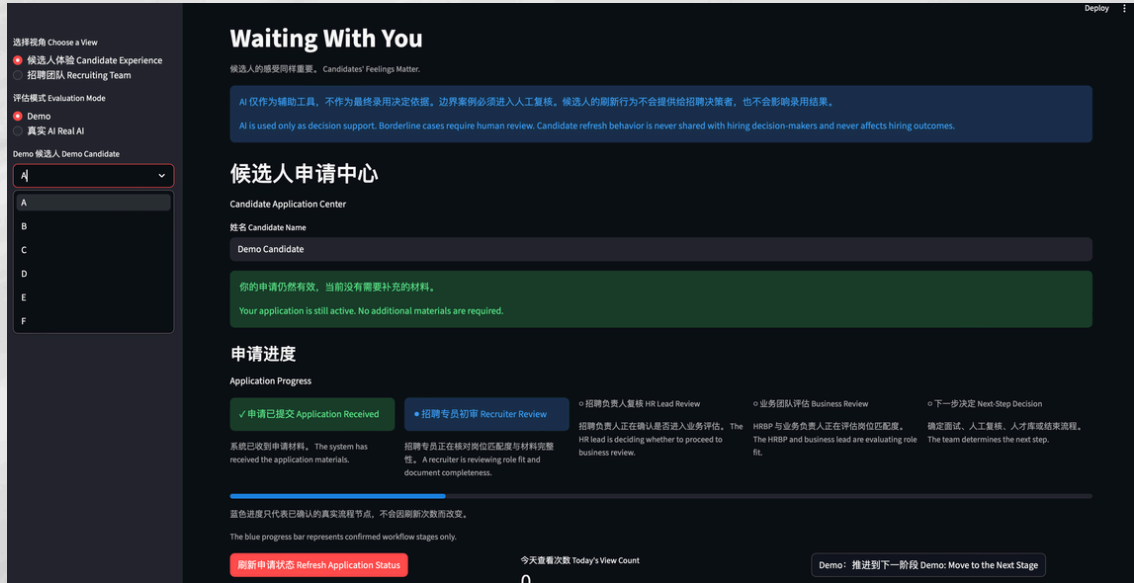

Version1 collected candidate information, evaluated behavioral responses, classified applicants, and supported recruiter and candidates review. It Worked, Technically BUT...

The interviewer asked me in which my product demonstrated my concern for the candidate, but I couldn't provide an answer. I graduated with a bachelor's degree in psychology. Based on my suffer feelings during the internship application, I demonstrated my concern for people's feelings in the group interview, but I failed to reflect this in the product.

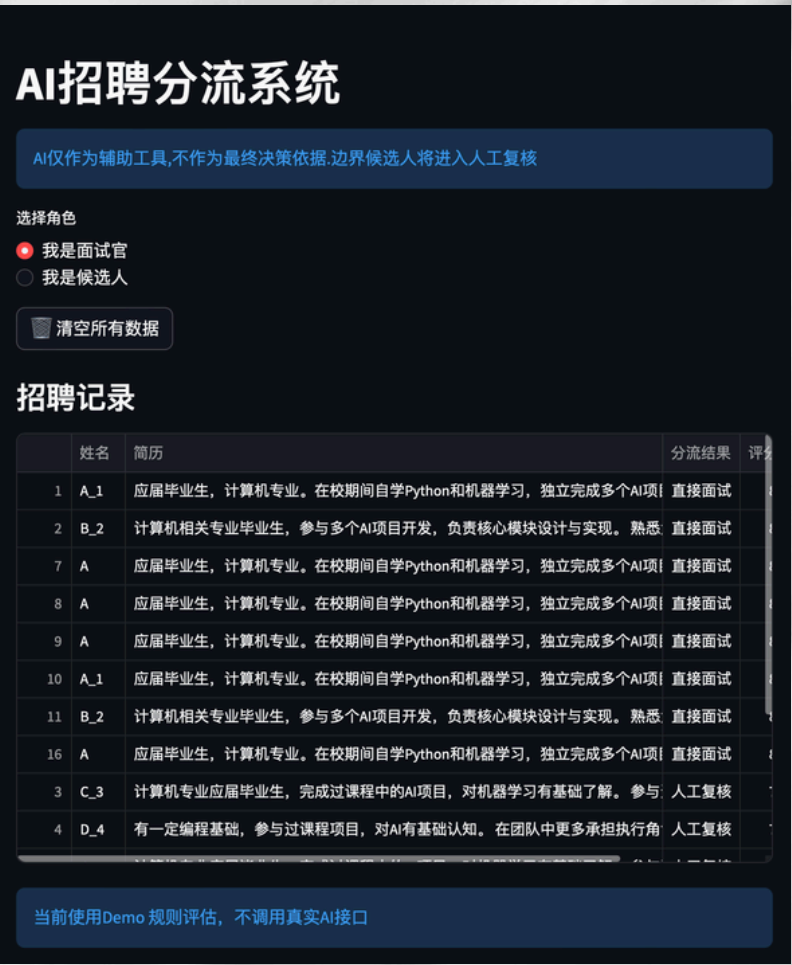

The innovation of Version 2 lies in focusing on the specific action of "refreshing", which represents anxiety. When the candidate frequently refreshes the page, Version 2 shows any differences from the previous state, which provides some comfort to the candidate. A new automatic consolation email for candidates has also been set up.

*Suffer feelings*

# Version 2 Overview- Candidate interface

## Name and AI Usage Statement

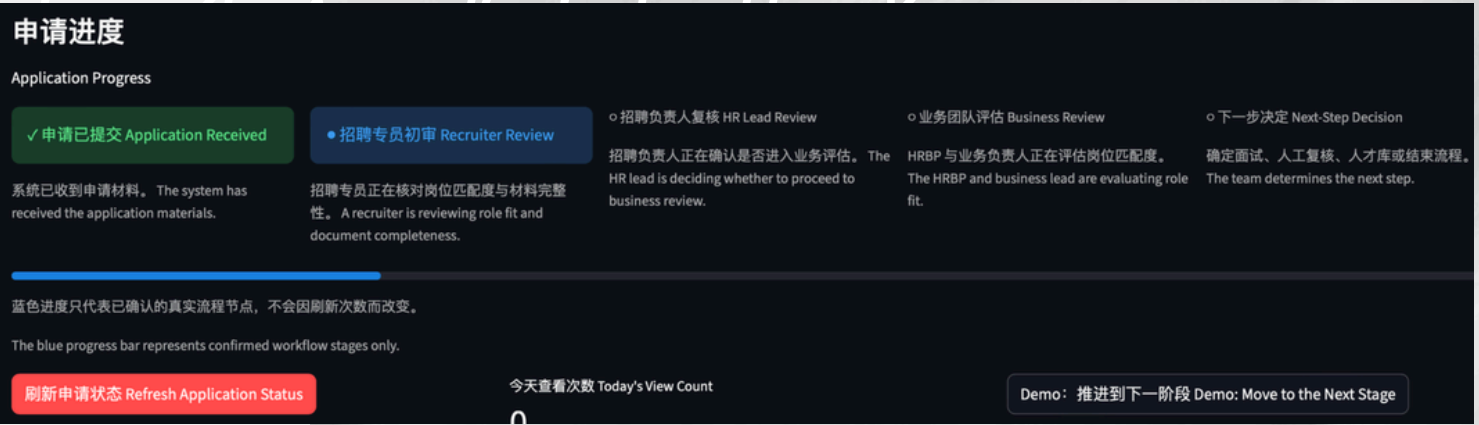

Select the candidate or recruitment team interface, and choose the real AI or demo mode. Select the candidates from the list

Select the candidate or recruitment team interface, and choose the real AI or demo mode. Select the candidates from the list

Many companies, in order to streamline their recruitment process, limit the application process to 4-5 steps, such as submitting the application, behavioral tests (if any), interviews, and the result. I deliberately inserted some realistic steps between submitting the application and the interview, so that candidates could shorten the time it takes for them to see the updates.
